## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2001/0036526.

The reference discloses a recording medium comprising a substrate, a dye recording layer, a reflective layer and protective layer. See Figure 1. The reflective layer is a silver alloy which is formed by sputtering in a thickness of 110-190nm. See Table 1. The Ar gas pressure may be varied to vary the diffraction spectrum of the layer. See [0050] which states that when the pressure increases, the diffraction decreases. It is recognized that the reference discloses a diffraction value above 0.4. However, the reference does contemplate values below 0.4 [0052]. While the preferred value is above 0.4, it would have been obvious to one of ordinary skill in the art to vary the pressure of the sputtering gas to optimize the sputtering conditions. As the end point claimed (below 0.4) is so close to the endpoint disclosed (above 0.4), one would expect overlap to occur.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 2001/0036526 in view of US 2003/0180473.

The '526 reference discloses the medium as described in the above rejection. It is recognized that the reference does not disclose a silver-sopper-neodymium alloy as the reflective material. However, the '473 reference shows that using a reflective layer of Ag-Nd-Cu is known in recording media. See [0119]. Therefore, it would have been obvious to one of ordinary skill in the art to substitute the silver reflective material of the '473 reference for the silver alloy disclosed in the '526 reference. Substituting one known silver reflective material or another would yield predictable results.
